**(54) HAIR REMOVING DEVICE**

(57) Abstract:

**PURPOSE:** To provide a hair removing device, which has the high hair removing efficiency and the excellent feeling of abutment on the skin and of which safety is improved.

**CONSTITUTION:** This device is provided with a rotating member 3, which is placed at the end of a main body 1 and which is rotated around a shaft, a hair removing means having pinching parts 44, which are rotated by the rotating member 3 and which face to each other and which can be opened and closed in the axial direction, and abutment part 45, which are extended from the end of the pinching parts 44 and which abut on the human body, and cam plates 24, 25 for opening and closing the pinching parts 44 in response to the rotating position of the hair removing means. In this device, the hair removing means is formed into the nearly circular shape in a side view so that a distance from the center of the rotation is increased, as the abutment part 45 comes close to the central part

from both ends.
